

## C.drive

### AN EXTRA MARGIN OF SAFETY

The Yokohama C.drive is earning a reputation as the "must have" tyre for safety. C.drive's superb handling capabilities provide extra vehicle stability in emergency-swerve situations. Tyre industry experts tested the C.drive in three 'real world' scenarios in over 280 test drives. The overwhelming conclusion was that the C.drive provides an extra margin of safety for the average motorist. Aside from safety, the C.drive is a sensible upgrade for your standard vehicle as the tyre is designed to offer sportier performance, a comfortable ride and low cabin noise that last as the tyre wears. The Yokohama C.drive is able to offer you sure-footed confidence with remarkable comfort.

#### TECHNICAL FEATURES

#### Asymmetrical Tread Design

C.drive's asymmetrical tread pattern is designed to provide excellent wet performance, improved dry handling, and lower road noise. The inner zone has softer, smaller tread blocks that offer excellent wet handling. The middle zone has a continuous rib design that offers low noise and better comfort feel. The outer zone has larger tread blocks that are more rigid for better dry handling and extra cornering grip.

#### Confidence in the Rain

Driving in the rain can be a frightening experience as it is difficult to see other vehicles or road signs, and even the road itself. Dirt and oil on the road can also make road conditions very slippery, while aquaplaning on puddles can lift your tyre off the road and reduce traction to almost zero. C.drive's silica based rubber compound grips the road at a microscopic level to ensure your vehicle gets maximum grip in the wet, while the four wide deep grooves flush away water to deliver superb wet traction.
